

The French Society of Physiology and Integrative Biology welcomes you to Versailles on July 2, 3, and 4, 2025, for its 8th annual congress

The theme chosen for this year is "Digestive Physiology at the Crossroads of All Systems: From Pathophysiology to Therapeutic Applications." This unifying theme, which brings together numerous innovations that have very recently entered clinical practice, has renewed approaches to common metabolic pathologies. It will be an opportunity to bring together the medical-scientific community around cross-disciplinary physiological approaches, the most fundamental, including those compared in animals, to clinical applications in humans. The congress will take place in the premises of the Faculty of Sciences of the University of Versailles Saint Quentin en Yvelines (UVSQ) located in Versailles, a few kilometres from Paris. It will be a new opportunity to bring together students, university researchers and clinicians in the most varied disciplines of Physiology around thematic conferences addressed by prestigious guests.

We aim at providing with ample opportunity for interaction during the scientific sessions and workshops, which will allow different generations of physiologists to meet and exchange ideas. A workshop dedicated to the French College of University Teachers of Physiology in Health will address projects and perspectives for educational innovations.

Young physiologists will be invited to present their latest work, the abstracts of which will be published in the *Acta Physiologica*. Several prizes and travel grants will also be awarded for the best poster and oral presentations.

Our traditional congress Gala evening will be an opportunity to bring you all together in a convivial Versailles setting for a gastronomic experience inspired by the meals of Louis XIV.
